**So Cal's Water Portfolio Just Got More
Drought Resistant**

California now leads the nation with the most comprehensive water reuse regulations that both protect public health and provide the region with a reliable source of water. New direct potable reuse regulations approved December 2023 by the SWRCB now allow the placement of highly treated water directly into water supplies without a temporal, spatial, or mixing buffer.

Join the So Cal Water Dialogue as we delve into the multi-year process behind the approval of the new regulations and what is needed to get DPR projects up and running. Expert speakers also will address the topics of affordability, public acceptance, advances in resource recovery, the role of AI and machine learning to optimize systems, and which projects could come online first.

Speakers:

- Dave Pedersen, President, WaterReuse California and General Manager, Las Virgenes Municipal Water District
- Jesus Gonzalez, Manager, LADWP Recycled Water Program
- Dr. Daniel McCurry, Assistant Professor of Civil and Environmental Engineering, USC Viterbi School of Engineering
